In-text citation:

Nowadays, it is known that the environment and health are inseparably interrelated (Rahimi et al., 2020). Environmental pollutants in the environment will affect human health sooner or later (Shi et al., 2020). This discipline will provide the foundation for understanding how environment pollutants affect health (Kaseb and Gupta, 2019). Skill graduates are also needed to identify or synthesize chemical or biological substances to cure or prevent diseases and to use their knowledge and expertise to add value to the natural resources (Belter, Haase-Kohn, and Pietzsch, 2017). The program is research oriented and focuses on method development and more detailed technical issues (Rahimi et al., 2020; Shi et al., 2020). Graduates will be trained to be both thinkers and practitioners (Heyer, 2004).

The Chemical Biology Program emphasizes the interface between Chemistry and Biology, as well as its potential applications for other fields (Rowe and Carson, 1979). The Program has been designed to train graduates to be capable of initiating collaborations on new frontiers of research with a multidisciplinary nature (Leelayuwapan and Ruchirawat, 2017).

The rapid development of many countries within the region has led to the widespread use of chemicals in Industry, Agriculture, Public Health, as well as in our daily lives (Tachachartvanich and Satayavivad, 2012). This has resulted in significant chemical contamination and deterioration of the environment, with unavoidable impacts on the economy, society, and the health of the people (Chulabhorn Graduate Institute, 2016).

In addressing these problems, there is a pressing need for experts in the field of Environmental Toxicology (Rahimi et al., 2020; Shi et al., 2020). CGI thus offers a graduate program in Environmental Toxicology to address this need to train a new generation of scientists that will become the driving force for the country, and region, in the years to come (Belter et al., 2017; Chulabhorn Graduate Institute, 2016; Rahimi et al., 2020; Rowe and Carson, 1979; Shi et al., 2020).
